PilExOS

PILOT EXAMINER SOFTWARE

PilExOS, the first purpose-built software operations platform designed by and for Pilot Examiners, expands support for Flight Training Operators through the new Checkride Manager portal.

- Student/Instructor Checkride tracking
- Streamlined Checkride scheduling
- Multiple locations
- Custom Checkride request URL
- Advanced Reports
- Virtual record keeping
- Virtual Plan of Action (POA)
- Post-Exam AI assessments
- Examiner Quality Management (EQM) analytics
- ACS code lookup
- Custom API integrations

Flight Schools — Applicants — Pilot Examiners

PilExOS has been a proven tool utilized by active Pilot Examiners to improve visibility, transparency, and communication throughout the Checkride process, while streamlining scheduling via availability search and reducing hundreds of hours per year on administrative tasks. Now Flight Training Operators can take advantage of the same scheduling benefits, while also gaining a next generation software system to oversee internal Examiner Quality Management (EQM) of Check Instructors for proficiency training and record keeping.

Checkride Data Management	Streamlined Scheduling	Virtual Record Keeping	Pre-built Reports	Virtual Plan of Action	EQM Analytics	API Integrations

Unlike most traditional tools and processes used by Flight Training Operators that utilize single functions across multiple systems, **PilExOS** combines several functions into one centralized platform to create a unified ecosystem. With seamless workflows, robust architecture, and the ability to integrate with third-party systems, **PilExOS** is the right solution to solve many of the problems within the flight training industry pertaining to Checkride management and Examining Authority. Utilize your data to reduce administrative tasks, improve training processes, and lower insurance premiums.
